

CLAIMS

What is claimed is:

5 1. An ultrasound imaging system, comprising:
 an ultrasound probe adapted to be placed in an instrument working channel of an
 endoscope, the ultrasound probe having a probe housing; an ultrasound transducer
 mounted within the probe housing; and an elongate flexible cord extending from the
 probe housing, the elongate flexible cord being adapted to fit through the instrument
10 working channel of the endoscope and operably connect the ultrasound transducer with a
 computer.
